

SUPPORT LETTER FROM THE HOME INSTITUTION

To whom it may concern,

I am writing to confirm that Ožbej Vodeb is indeed employed at the National Institute of Chemistry in Ljubljana, Slovenia and to express the institution's support for his application for a Short-Term Scientific Mission under COST Action CA24103, EU-CONCERT.

The proposed STSM, entitled "Advanced Voltammetry and Electrochemical Simulations Training," is planned from 16th to 22nd of August 2026. The mission is directly linked to Dr. Vodeb's professional development, as he will participate not only in learning advanced electrochemical techniques and DFT simulation, but also by disseminating his knowledge of modelling electrochemical experiments. During the STSM he will present ElectroKitty, a Python library built for simulating electrochemical responses and how such tools can be used to analyse data. By receiving training in advanced voltammetric techniques and using DFT for predicting adsorption energies and constructing free energy diagrams, he will develop the skill and expertise needed to help bridge the gap between experiment and simulation. The STSM will thus help him grow skills in computational and experimental electrochemistry, evaluation of numerical methods, code development, and creating reproducible theoretical and experimental workflows. This mission will also foster future knowledge transfer between the University of Tartu and the National Institute of Chemistry, thus opening opportunities for future collaboration.

The National Institute of Chemistry supports Dr. Vodeb's participation in this STSM and confirms that the visit is consistent with his professional development. He is authorised to undertake the mission during the stated period, subject to approval and funding by COST Action CA24103.

Sincerely,

Prof. Dr. Nejc Hodnik
National Institute of Chemistry,
Department of Materials Chemistry
