

30/07/2026

Dear Dr. Ožbej Vodeb,

I would like to warmly invite you to give an invited lecture and practical course at our Workshop on Advanced Voltammetry and Electrochemical Simulations, which will take place at the University of Tartu, Estonia, on 16-22 August 2026.

Our international workshop is being organized by the University of Tartu, and will bring together researchers interested in advanced electrochemical methods, electrocatalysis, electrochemical modelling, and density functional theory (DFT). The program will combine lectures with hands-on training sessions covering Fourier-transformed AC voltammetry (FTACV), electrochemical simulations using the open-source ElectroKitty software, and DFT-based microkinetic modelling. The aim is to exchange knowledge between experimentalists and computational researchers and to encourage new collaborations within the electrochemistry community.

It would be a wonderful opportunity for our students and researchers to learn from your experience and to discuss new ideas with you.

We very much hope you will be able to join us in Tartu.

Please let me know if you need any additional information.

With best regards,

Sincerely,
Prof. Nadežda Kongi
